

client.conf:

```
create interface if0
set if0.family Ipv4
set if0.host "127.0.0.1"
set if0.port "3300"
activate if0
```

```
create peer peer0
set peer0.family Ipv4
set peer0.host "192.168.1.101"
set peer0.port "3301"
activate peer0
```

listens on

127.0.0.1:3300

ip: 192.168.1.100

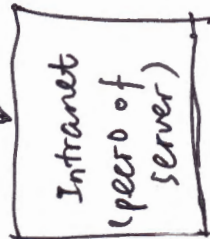

wanproxy -c client.conf

listens on
localhost:3301

ip: 192.168.1.101

wanproxy -c server.conf

ip: 192.168.1.102

doesn't need wanproxy.

server.conf

```
create interface if0
set if0.family Ipv4
set if0.host "localhost"
set if0.port "3301"
activate if0
```

```
create peer peer0
set peer0.family Ipv4
set peer0.host "192.168.1.102"
set peer0.port "80"
activate peer0
```
